

LEADING HOSPITALS. TRUSTED CARE

Excellent Specialty Care is Our Trademark

Key Service Lines

More than 800,000 patients a year entrust their care to the 8,700 employees and more than 3,000 affiliated physicians at HCA-HealthONE® LLC hospitals and outpatient centers. Our healthcare professionals are second to none. Their priority is to ensure consistent, high-quality patient care across our system.

HealthONE's extensive network was developed to provide more convenient access to the vast range of services and experts that our communities need for screening, diagnosis, treatments, surgery, rehabilitation, and ongoing health and wellness needs.

ER/Trauma

HealthONE has eight full-service Emergency Departments – 6 at our hospitals and 2 free-standing ERs. These include a Level 1 Trauma Center (adult and pediatric) at Swedish Medical Center; Level II Trauma Center at The Medical Center of Aurora; and Level III Trauma Center at Sky Ridge Medical Center. AIRLIFE-Denver is our air medical transport serving facilities in an eight-state region.

HealthONE's The Medical Center of Aurora demonstrated leadership in cardiovascular care by developing Cardiac AlertSM with physicians and EMS partners in 2001. Local EMS now have advanced equipment and training to identify heart attack patients in the field and alert hospitals of their arrival so staff and physicians are ready to treat these patients as soon as they arrive. Quick response times and 24/7 cardiac surgery backup help us save lives.

HealthONE hospitals perform 1 in 5 of all cardiovascular surgeries in the state.

HealthONE Heart Care network also includes accredited Chest Pain Centers; some of the busiest catheterization laboratories in Colorado; the area's most advanced electro-

physiology programs and technologies; and a range of progressive therapies such as Aquapheresis, a safe and effective treatment that improves a Congestive Heart Failure (CHF) patient's quality of life. Surgeons at Rocky Mountain Hospital for Children Pediatric Heart Institute at P/SL perform more than 100 surgeries a year to treat our youngest patients with congenital and other heart defects.

Swedish Medical Center and The Medical Center of Aurora have advanced centers for neurosciences. Patients throughout the region seek the neurologists, neurosurgeons and neuro trauma specialists at both institutions for care ranging from Chiari malformations to critical head traumas, movement disorders, aneurysms and stroke, MS, epilepsy, head and neck tumors and spinal cord injuries. Additionally, HealthONE's Spalding Rehabilitation Hospital – the first licensed rehab hospital in our state – offers comprehensive brain injury and stroke rehabilitation with more certified staff than any other Colorado facility.

Our renown stroke network – lead by Swedish Medical Center – is the most experienced and extensive in the Rocky Mountain Region. Swedish treats nearly three times more stroke patients than any other hospital in the state. Stroke neurologists provide immediate care to patients in remote locations through a network of more than 15 telemedicine cameras across Colorado. HealthONE Stroke Care is the only network offering interventional neuroradiology with three INR physicians and comprehensive services. We also have 5 neurohospitalists, 4 neurovascular neurosurgeons, the first Stroke Certified Air Transport Teams as part of AIRLIFE-Denver; and two JCAHO-accredited Primary Stroke Centers at Swedish (in 2011 received 4th consecutive certification) and The Medical Center of Aurora. All this adds up to faster, better care and improved patient outcomes.

>>>

HealthONE provides every female patient with individualized care to meet all her childbearing to post-menopausal needs.

More expectant moms trust HealthONE for superior prenatal, labor and delivery care. Our highly experienced OB staffs, nurse midwives and Doula services set us apart – delivering more than 13,000 babies each year – accounting for 30% of all babies born in the metro area. Our hospitals were first in the metro area with OB Airstrip, allowing doctors to monitor fetal and maternal conditions on their hand-held mobile devices during the hours prior to delivery. Additionally, HealthONE offers world-renown fertility experts on our campuses, 24/7 high-risk perinatologists, the most-experienced high-risk OB physicians and transport team in the eight-state region, and the highest level NICUs available that aim to keep new moms close to their babies.

HealthONE Women’s Care also is a leader in robotic, minimally invasive gynecologic procedures and offers the full continuum of care for women of all ages. This includes advanced breast care, including all-digital breast centers for screening, diagnostic mammography and ultrasound, stereotactic and ultrasound guided biopsy – as well as minimally invasive treatments and technologies. Our Breast Cancer Survival rates surpass state and national averages for all stages of cancer and years of survival.

HealthONE cares for more cancer patients than any other system or hospital in Colorado.

Our Cancer Care network incorporates state-of-the-art imaging and treatment technologies. Our specialists, researchers and surgeons are regional leaders in treatment of cancers of: GI/digestive tract; respiratory system; lymphatic system; brain and nerves; blood (leukemias); male and female reproductive systems; bones; kidney and urinary tract; liver; breast; multiple myeloma; pancreas; endocrine system; and skin. We care for the most patients needing bone marrow transplants, and breast and gynecologic cancer

treatments in metro Denver. Our patient-centered approach uses teams of patient navigators, physicians, surgeons, nurses, social workers, therapists and others to work with each patient on an individualized treatment plan.

Orthopedic and Spine Care Specialists at HealthONE exceed national standards on quality and outcomes for patients who have full- or partial-joint replacements or back surgeries. Minimally invasive techniques and advanced technologies help patients recover more quickly than traditional surgeries. Our dedicated teams have years of experience in helping patients seeking bone, joint and spine care — in fact, Sky Ridge performs nearly twice the number of spine surgeries than any other hospital in the state.

With four nationally designated Centers of Excellence in Weight Loss

Surgery, HealthONE is a regional leader in Bariatric Care treating more than 64% of all patients seeking help reducing weight and serious life-threatening conditions caused by morbid obesity. Our regionally and nationally recognized surgeons work with patients for many months before and after surgery to ensure safety and improve patient outcomes.

HealthONE established a wide network of outpatient imaging centers across the

metro area to improve access and ease of scheduling for patients, and ensure quick, high-quality digital images to physicians no matter which HealthONE center the patient chooses. Most important, HealthONE board-certified and fellowship-trained radiologists with expertise in a variety of disciplines analyze the tests, offering each patient’s physician more accurate readings.
